

SPRING GREEN UP CHLOROPHYLL BUILDER

Spring color can be tough to create sometimes, especially when Mother Nature is working against you. Turf Fuel's Spring Green Up program is filled with key ingredients to promote chlorophyll production and incredible color. This program works best with some sunshine and air temperatures greater than 45 F. Multiple applications may be necessary depending on environment however color will build over time.

RECOMMENDED

VERTICAL™
3 fl.oz / 1,000 ft²

VERTICAL drives chlorophyll production by facilitating rapid nutrient absorption. Key ingredients to colonize soil biology and Powered by university proven NUTRIFENSE® technology.

PHOTO FUEL®
3 fl.oz / 1,000 ft²

Specifically crafted to provide the plant with the essential nutrients required for chlorophyll production. Photo Fuel builds chlorophyll density to capture more sunlight and provides an intense deep dark green color.

QUICK GREEN™
6 fl.oz / 1,000 ft²

Phosphorous availability is limited in the spring due to low soil temperatures. Quick Green delivers foliar phosphorous, available forms of nitrogen and a unique biostimulant group engineered to promote lateral growth and canopy density.

PRODUCT RATE RECOMMENDATIONS

Apply every 14 days as regular maintenance. For rapid density and color building, apply every 4-7 days.

*Some sun and >45F temperatures recommended for best results
